

Nologin, a company connected thanks to Interact Pro

Nologin, for its offices in Zaragoza, was looking for a change in its lighting. In just one day, Interact Pro became a reality, opening up a range of multiple lighting possibilities.

“Interact Pro and the new lighting defines us as a company with the following components of flexibility, dynamism and customization. We have found a very solid solution for us.”

Jorge Marco. Nologin Operations Director

Customer challenge

When Nologin decided to renovate its facilities, it was clear that lighting was a very important element for its future projects.

For a company that specialises in technology the lighting control became a priority within the different changes they projected for their new offices, in which the multiple work spaces and the different employee work shifts which cover 24 hours, required different scenes and possibilities. Interact Pro has managed to offer them, depending on each user, task or location, a light for each particular moment.

Solution

The system allows managers and employees, depending on their level of authorisation, to light spaces to their liking, creating scenes based on the time of day to make better use of natural light. The aim is to make the working environment more comfortable and make savings of almost 70% compared to the previous lighting option.

Therefore, a SME like Nologin can control from a simple application on any device (mobile, tablet or computer) the different lighting points or motion sensors, as Interact Pro also allows the installation of presence detectors.

Interact – Making it happen

In total Nologin has installed 120 CoreLine Panels, which do not require complex installation and that in five steps (unpacking the product, installing the gateway, downloading the program, configuring the luminaires and finally managing the system within the Interact Pro portal) allow the scenes in the different rooms to be configured, in just a few hours, to obtain the desired lighting level. In addition, there is no need to rewire,

which is a benefit in terms of both time and money. Maintenance is not necessary either, since the system itself has an alert system.

Like Nologin, any SME can find within Interact Pro the best lighting solution for their company, adapting to any office or workspace and obtaining cost savings, efficiency and overall well-being.

Visual comfort

The ability to individually control light scenes and lighting intensity, both area by area and point by point, ensures that Nologin workers and users enjoy the best lighting conditions for each working task.

Energy saving

Thanks to the new luminaires and the Interact Pro management system, Nologin has achieved energy savings of 70% compared to the previous installation.

Easy installation

The existing wiring was used for the installation of the new luminaires, which meant that the lighting system could be updated quickly in a single day, saving on installation work and minimising disruption to the company's daily work.

Customized control

Interact Pro allows individual control of lighting through any device connected to the network (mobile, tablet, computer...) regulating the different points of light in the installation to create a more intelligent working environment.
