interact Pro

Is your business ready for smart lighting?

Would your business benefit from a smart lighting system?
Use this checklist to assess your priorities and see how smart
lighting can contribute to your business success.

What are your priorities for your workplace upgrade, refit or move?

Would you like to create a more comfortable work environment?

With the Interact Pro app, your workers can adjust light levels at their workstations to suit their eyesight or task.

- ☑ Increase light levels to energize workers and help them be productive.
- ☑ Medium light level for screen work.
- ☑ Decrease light level to create a relaxing environment during breaks.

Get more out of your floor space with multipurpose work areas

Interact Pro makes it easy to match your lighting to the different ways your team uses your space with lighting profiles.

- ☑ Create adaptable multipurpose spaces, rooms and areas.
- ☑ Set the scene instantly for brainstorming, conferences, customer meetings, informal get-togethers, audio-visual experiences or demonstrations.
- ☑ Easily change your lighting when space usage changes.

Stop lighting empty space

You'd be amazed how much energy your business can save when lights are on only when they're needed – and dimmed or off when they're not. Interact Pro software lets you use automation and sensors to minimize energy usage.

- ☑ Tailor lighting to your work schedules, shifts or foot traffic using automated lighting profiles and dimming zones.
- ☑ Use motion sensors to activate the right light levels instantly when people are present.
- ☑ Use daylight sensors to reduce light levels when natural light is strong.

### Stop worrying whether someone turned the lights off

With a smart lighting system, there's no need to manually turn lights on and off. You can set all the lights in your building to switch off or dim at a certain time – or schedule specific zones to suit different teams or shifts.

- ☑ Lights dim or turn off automatically in empty rooms, work zones and floors.
- ☑ Schedule lights to stay on after hours in zones where people are still working.
- ☑ Lights activate instantly when sensors detect movement.

Monitor your lighting's impact on your energy footprint

Take control of your lighting via the Interact Pro dashboard. You or your installer can monitor lighting usage and energy consumption to further optimize your lighting as your business changes.

- ☑ Identify areas using a lot of light and adjust settings to save energy.
- ☑ Optimize lighting schedules where lighting usage seems out of sync with usage.
- ☑ Meet sustainability and energy rebate program targets.

If you identify with the priorities above, ask your installer about Interact Pro. It's an intuitive app and dashboard that works with Interact Ready lighting to bring the cost-saving power of IoT to small and medium sized enterprises. It's a smart and energy-conscious choice for any business that's thinking about the future.

Installation is fast, easy and cable-free

Installer   **You**

01
Install
Your installer can set you up quickly with up to 200 light points. Start with one area and expand to include more areas later.

02
Configure
Using the Interact Pro app, your installer can activate your lighting system in minutes and set your energy-saving automation schedules.

03
Download
With everything connected, your staff can download and use the Interact Pro smartphone app.

04
Adjust
Your staff can use this app to adjust their workspace lighting to their personal preferences.

05
Manage
You can monitor and manage your lighting remotely from the Interact Pro dashboard and app. Or you can leave this up to your installer.
